SUMMARY

Frontend engineer with a full-stack mindset who spent nearly four years on Expedia Group's design system, building the React/TypeScript components, design tokens, and tooling that every Expedia Group brand built its web experiences on. Since then has shipped a desktop product for a client, a browser game on a custom Canvas engine, and a Supabase-backed PWA, building with Claude Code daily and reviewing every change. Known for clean, well-tested code, well-scoped PRs, and a hard accessibility bar.

TECHNICAL SKILLS

Frontend: React (expert), TypeScript (expert), JavaScript, HTML/CSS, Sass/SCSS, Tailwind, Next.js, Redux, Zustand, Framer Motion, Canvas API

Design Systems: component APIs, design tokens (cascading theming, per-brand overrides), Storybook (expert), Figma and Figma plugin development

Backend & Data: Node.js, Express, GraphQL, REST APIs, Supabase/PostgreSQL (RLS, RPCs), SQLite, MongoDB, AWS S3, Electron

Quality & Delivery: Accessibility Champion, WCAG, Jest, Vitest, Playwright, Cypress, GitHub Actions CI, Docker, Vite, Vercel

AI-Assisted Development: Claude Code as a primary build tool across shipped work, with human review of every change

EXPERIENCE

Front End Engineer II, Design System Platform | Expedia Group

2022-03 - 2026-01 | Seattle, WA

- Built and maintained React/TypeScript components in the Expedia Group Design System (EGDS), the shared UI layer every Expedia Group brand, including Expedia and Vrbo, built its web experiences on; worked closely on core components such as the **modal**, **calendar**, and **seat selector**
- As a designated **Accessibility Champion**, brought library components up to WCAG standards so every consuming brand inherited accessible defaults instead of fixing them page by page
- Built paired **GitHub Actions** workflows that published a temporary EGDS build and ran it against the largest consumer's full test suite, catching regressions our own tests missed as an advisory signal rather than a hard gate; enforced an **80% coverage threshold** on all PRs
- Integrated a **cascading design token system** enabling theming, inheritance, and per-brand overrides on one shared implementation
- Shipped a **Storybook playground plugin in 3 days with Claude Code**, letting designers and engineers build, save, and share live component snippets; also helped migrate all component documentation to Storybook
- Built a **Figma plugin** that imported design token values and checked designs against the EGDS specification
- Embedded with brand teams on their sprints; when Vrbo needed a crypto payment option, unblocked them with a team-owned component, then worked with head designers to promote it into the core library for every brand

Associate Software Engineer | Hubsharp Solutions

2020-04 - 2020-11 | Austin, TX

- Rebuilt an inventory management app from PHP/Laravel to Node/Express, integrated the Plaid API for bank onboarding, and implemented AWS S3 storage across client projects

Associate Software Engineer | Inventive Group

2019-07 - 2019-11 | Austin, TX

- Hired onto the consulting team after finishing top of a 6-month program; built a React payment system application and delivered client website changes
-

PROJECTS

WaveLength | [Live Demo](#) | [GitHub](#)

A browser puzzle game on a custom TypeScript engine where players wire processing nodes together to shape waveforms into a target. **Tech:** TypeScript, Canvas API, Claude Code

- Built the Canvas-rendered waveform graphing, signal processing, a node-based editor, and a validation engine plus six puzzles; showcase post drew 178 likes and 29 comments

Tabula | Desktop product shipped for a client

A visual rule engine for transforming and auditing CSV data, delivered as Windows and macOS installers. **Tech:** React 19, TypeScript, Electron, SQLite, Zustand, Mantine, Vitest, Playwright

- Built a drag-and-drop rule canvas, undo/redo, cell-level overrides, a custom typed DSL, and a row-by-row audit trail on self-contained SQLite documents with versioned schema migrations

House Menu | Personal meal-planning PWA

An installable meal-planning and grocery app. **Tech:** React, Vite, Supabase (PostgreSQL), Vercel

- Put the domain logic in Postgres RPCs, proving every migration in a throwaway Docker Postgres with deliberate sabotage tests; ships a secret-free in-memory demo build and passkey sign-in via Supabase Auth
-

EDUCATION

Coding Bootcamp Certificate - Full-Stack Web Development, Inventive Group (2019), top of cohort

B.S. Music Production - Full Sail University (2016)
