SUMMARY

Frontend engineer who spent nearly four years building Expedia Group's design system: the React/TypeScript components, tokens, and tooling behind every Expedia Group brand's web experience. Now shipping full-stack apps end to end: a desktop product for a client, a Canvas browser game, and a Supabase-backed PWA, built with Claude Code and reviewed change by change. Known for well-tested code, well-scoped PRs, and a hard accessibility bar.

TECHNICAL SKILLS

Frontend: React (expert), **TypeScript** (expert), JavaScript, HTML/CSS/SCSS, Tailwind, Next.js, Redux, Zustand, Framer Motion, Canvas API
Design Systems: component APIs, cascading **design tokens** and per-brand theming, **Storybook** (expert), Figma plugin development
Backend & Data: Node.js, Express, GraphQL, REST APIs, Supabase/PostgreSQL (RLS, RPCs), SQLite, MongoDB, AWS S3, Electron
Quality & Delivery: **Accessibility Champion**, WCAG, Jest, Vitest, Playwright, Cypress, **GitHub Actions** CI, Docker, Vite, Vercel
AI-Assisted Development: Claude Code as a primary build tool across shipped work, with human review of every change

EXPERIENCE

Software Engineer | Contract, private client

2026-04 - 2026-07 | Remote

Designed and built Tabula solo, a desktop app that turns hand-edited CSV routines into repeatable, auditable workflows. Shipped to the client as a Windows installer, now in beta.

- Built a typed rule language with a visual block editor, three-valued logic, and per-row traces that explain every changed value
- Made every export replayable: snapshots, engine version, and a SHA-256 hash, with tests proving replays reproduce the original output
- Shipped with about 810 unit tests and about 60 Playwright scenarios that drive the real Electron app
- Kept a numbered decision log of 60+ entries through a mid-project pivot from single-purpose tool to general rule engine

Tech: Electron, React, TypeScript, SQLite, Zustand, Playwright, Claude Code

Front End Engineer II, Design System Platform | Expedia Group

2022-03 - 2026-01 | Seattle, WA

Built and maintained React/TypeScript components in the Expedia Group Design System (EGDS), the shared UI layer every Expedia Group brand, including Expedia and Vrbo, builds its web experiences on. Rotated between brand-team support, maintenance, and feature pitches within agile teams of 3-5.

- Built and maintained core EGDS components, including the modal, calendar, and seat selector, where layout, state, and keyboard access all have to hold up at once
- As a designated Accessibility Champion, brought library components up to WCAG standards so every consuming brand inherited accessible defaults
- Built paired GitHub Actions workflows that ran a temporary EGDS build against the largest consumer's full test suite, catching regressions our own tests missed. Kept the signal advisory so flaky consumer tests never eroded trust
- Integrated a cascading design token system for customer theming, inheritance, and overrides, and built a Figma plugin that imports token values to keep designs aligned with the EGDS spec
- Built a Storybook playground plugin for building, saving, and sharing interactive code snippets, delivered in 3 days with AI-assisted development
- Embedded with brand teams on their sprints; unblocked Vrbo's crypto payment option with a team-owned component, then worked with head designers to promote it into the core library

Associate Software Engineer | Hubsharp Solutions

2020-04 - 2020-11 | Austin, TX

- Rebuilt an inventory management app from PHP/Laravel to Node/Express, integrated the Plaid API for bank onboarding, and implemented AWS S3 storage across client projects
-

PROJECTS

WaveLength | [Live Demo](#) | [GitHub](#)

A browser puzzle game on a custom TypeScript engine where players wire processing nodes together to shape waveforms into a target. **Tech:** TypeScript, Canvas API, Claude Code

- Built the Canvas-rendered waveform graphing, signal processing, a node-based editor, and a validation engine plus six puzzles; showcase post drew 178 likes and 29 comments

House Menu | **Personal meal-planning PWA**

An installable meal-planning and grocery app. **Tech:** React, Vite, Supabase (PostgreSQL), Vercel

- Put the domain logic in Postgres RPCs, proving every migration in a throwaway Docker Postgres with deliberate sabotage tests; ships a secret-free in-memory demo build and passkey sign-in via Supabase Auth
-

EDUCATION

Coding Bootcamp Certificate - Full-Stack Web Development, Inventive Group (2019), top of cohort

B.S. Music Production - Full Sail University (2016)
